

ABIES

UPHOLSTERED FURNITURE PRODUCTION

ABOUT US

The two founders of ABIES started their business 16 years ago based on two core premises: high quality and professionalism.

Through consistency and permanent compliance with these premises, they have transformed what then used to be a small carpentry workshop into an advanced and modern upholstered furniture plant.

The 6700 sqm facility hosts 100 employees who carry out the production of 150 items upholstered furniture per day.

MANUFACTURING AND TECHNOLOGY

Once with the implementation of the quality management system ISO 9001/2008, we make sure that the entire manufacturing process exclusively includes top quality materials.

Benefits of quality management system - products will be of more consistent quality, improving efficiency and productivity.

After a strict inspection of the materials, the different components of the upholstered furniture items are sent to the qualified personnel for processing.

Frames are made with a combination of engineered wood and solid hardwood products ensuring superior quality and uniform strength. Components are produced using CNC technology. This technology allows us to manufacture more complex frames and increases consistency in frame design and construction.

In order to make sure that our products comply with the required standards, we are constantly preoccupied with the modernization and technical improvement of the production units with new and advanced technologies and equipment.

PORTFOLIO

For DE TOEKOMST BV

ENERGY FROM BIOMASS

Wood waste is one of the most abundant, cost-competitive, and environmentally friendly biomass resources. All our wood waste and residues from manufacturing is used to minimize the heating requirement.
